CAPABILITY STATEMENT

MELBOURNE · AUSTRALIA-WIDE

MAY. 2026

Design-Led Stone Solutions for Streetscapes & Civic Landscapes.

An aerial photograph of a circular playground area. The ground is paved with a light-colored stone pattern. In the center, there are four wooden benches with curved tops, arranged in a circle. A child is sitting on a yellow ball in the center of the circle. The area is surrounded by a low wooden fence and some greenery. The text "ACKNOWLEDGEMENT OF COUNTRY" is overlaid on the image.

ACKNOWLEDGEMENT OF COUNTRY

Urblo acknowledges the Traditional Owners of the lands on which we live, work, and source the materials of our craft. We pay our respects to Elders past, present and emerging, and recognise their enduring connection to Country — a relationship that continues to shape how we think about place, permanence, and the public realm.

01 / OUR PHILOSOPHY

“Stone is the slowest material we work with — formed over millennia, finished in millimetres.”

Most suppliers ship stone. We design with it. Not as cladding for an idea, but as the idea itself — weighted, weathered, intentional.

Urblo exists for the moments where a streetscape stops being infrastructure and starts being a place worth standing still in. The seat that catches afternoon light. The threshold that announces an arrival. The detail you notice on the third visit, not the first.

We believe the public realm deserves the same care we give a private interior — and the same technical rigour we give a structural connection. That belief is the brief.

May 2025

A specialist, design-led stone partner.

Founded in 2024 and headquartered in Melbourne, Urblo is a specialist manufacturer and supplier of premium stone solutions, bespoke street furniture, and complex hardscape elements for civil and urban projects Australia-wide.

Urblo exists to bridge a long-standing gap in our industry: the one between the creative ambition of design and what actually gets built. Most stone suppliers can quote a slab. Few can read a section detail, understand a shadow gap, and prototype the geometry on a CNC bed in the same week. That is the work we exist for.

Operating at the intersection of design, manufacturing and construction, we partner with tier-one builders, landscape architects and developers to deliver public realm work that is technically resolved, beautifully made, and built to outlast its first decade.

Behind a young company sits a deep bench. Urblo is co-founded with SAI Stone — a Melbourne City Council appointed supplier with more than two decades of stone-industry depth. That partnership gives Urblo's design ambitions a manufacturing, engineering and supply-chain backbone built for the demands of tier-one civil programs.

02 / ABOUT URBLO

2024

FOUNDED IN MELBOURNE

20+

YEARS OF STONE
EXPERTISE

MCC

MELBOURNE CITY COUNCIL
APPOINTED SUPPLIER

***We don't supply stone.
We resolve it.***

We work upstream of the typical supplier conversation. Concept reviews, buildability workshops, prototyping, value management, shop drawings, installation methodology — wherever the friction is between design intent and what gets built, that is where we lean in.

I. Design first, always.

Every project begins with the architectural intent. Materials, geometries, finishes and details are reverse-engineered to protect the design — not the other way around.

II. Built like a partner, not a vendor.

We sit alongside design teams from sketch through site. ECI input, value management, prototyping, drafting, install — we behave like part of the studio, not a quote at the end of an email.

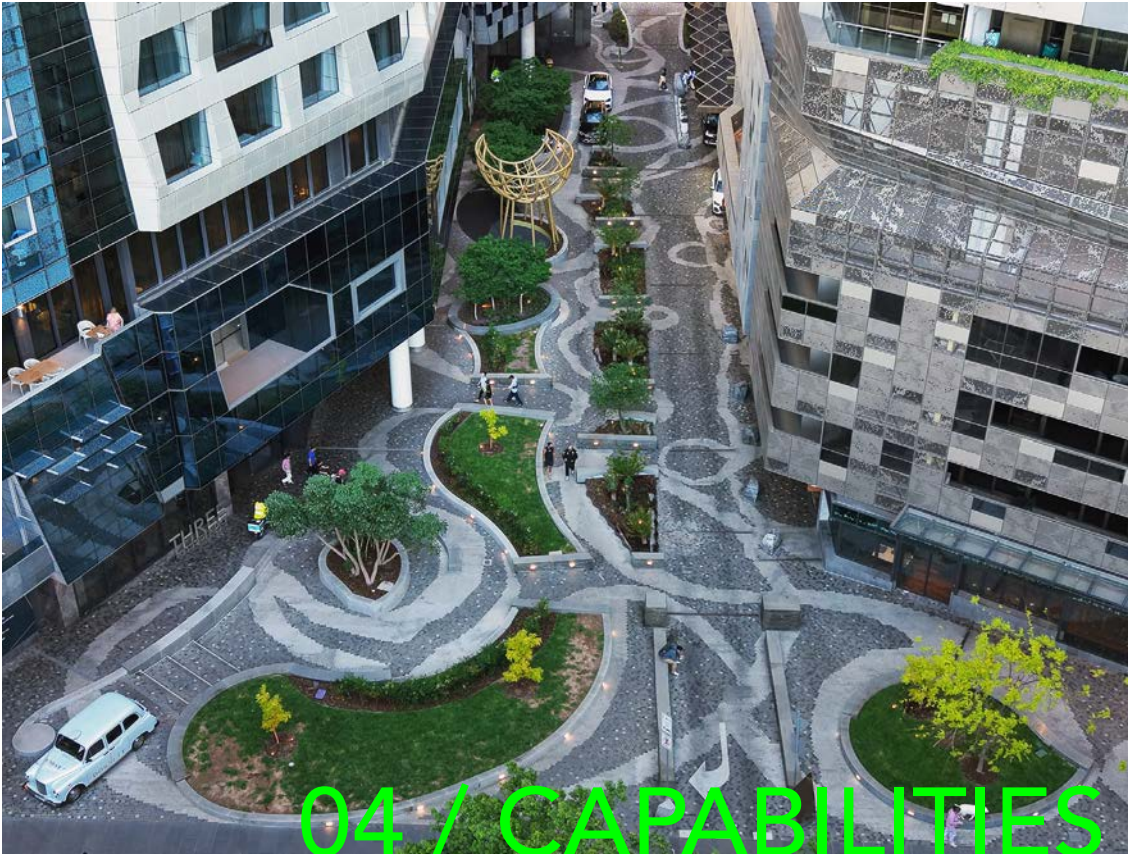

III. Crafted, but not precious.

Our work runs on CNC precision and hand finishing in equal measure. We hold tolerances measured in millimetres while delivering at civil scale, on civil program.

03 / OUR APPROACH

Photography of Pre-assemble in Urblo Factory
Feb 2026

Stone, considered — and the disciplines around it.

04 / CAPABILITIES & PRODUCT RANGE

Our specialty lies in highly complex 3D stone geometries, but our manufacturing capabilities cover the full spectrum of hardscape requirements — supplied in premium granite, bluestone, sandstone, and select international stones, specified to the brief.

- **Bespoke street furniture & public art**
- **Premium paving & architectural cladding**
- **Advanced stone machining**
- **Multi-material assemblies**
- **Design & technical service**

1. Bespoke Street Furniture

Custom stone seats, boulders, bollards, planters, sculptures, water features and engraved inlays. Complex 3D geometry is our specialty — the pieces other suppliers say can't be made, or won't be made on program.

2. Premium paving

Large-format paving and wall cladding supplied alongside our 3D elements, so material continuity is held across the entire project footprint.

3. Advanced stone machining

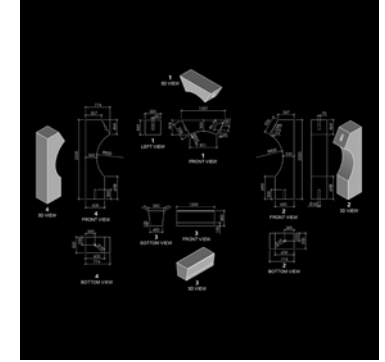

State-of-the-art CNC capability paired with artisanal hand finishing. Consistency across every exposed face — sawn, honed, flamed, and bespoke finishes developed to brief.

4. Multi-material assemblies

Where stone remains the hero, we integrate composite timber tops, metal frames, armrests and concealed structural steel into our stone work as a single, coordinated supply package.

Composite-timber benches built around our stone — with metal framing and integrated armrests — are delivered with every interface, tolerance and finish resolved to spec. One supplier, one accountability line, across every material in the assembly.

5. Design & technical service

Concept-to-construction support, comprehensive shop drawings, engineering input and installation guides — built so design teams can spend their hours on design, not on drafting interfaces.

04 / CAPABILITIES & PRODUCT RANGE

05 / NATIONAL REACH

Melbourne-based. Working Australia-wide.

Headquartered in Melbourne, Urblo works with clients across Australia. Active markets currently span Victoria, New South Wales and the ACT, with Queensland now underway — and a proven track record on technical interstate work, including recent highly detailed projects in Canberra. We adapt our service model to the location and rhythm of each project.

Interstate — Strategic Premium Supply

For projects beyond Victoria, our focus is high-precision supply paired with project-specific installation methodologies. We empower preferred local contractors with the drawings, sequencing and detailing they need to install our work to the design intent.

Victoria — Supply & Install

In our home market, we partner with Urblo-certified installation teams for an end-to-end supply-and-install service. One point of accountability from prototype to handover.

Remote technical service

Online detailing sessions, express sample delivery anywhere in Australia, and in-person site visits from our technical directors and leadership team for tier-one works.

+ completed project + on going project

0 1km 3km 5km

06 / END-TO-END LIFE CYCLE SUPPORT

From the first sketch to the tenth-year visit.

2. Tendering

Value management and comparative material strategy (concrete vs. stone) to help bids win on both cost and lifecycle value, without compromising the design intent that won the brief.

1. Early Contractor Involvement

Budgeting, bespoke prototyping, design service, and our Carbon Neutral offer for projects working to Green Star and ESG targets — surfacing risk and opportunity while the design is still flexible.

Efflorescence

Cracking

Fading

CONCRETE VS STONE

3. Construction

Factory pre-assembly for seamless site alignment, specialised handling tool hire, and comprehensive maintenance guides — followed up by ongoing support long after practical completion.

07 / OUR CO-FOUNDER & DIRECTOR

Natalie Ma
CO-FOUNDER & DIRECTOR

“We started Urblo to bridge a gap we kept seeing — between the creative ambition of design and the practical reality of what gets built. Stone was our entry point. Design fluency is the thread.”

Natalie Ma is the co-founder and director of Urblo. She brings an unusual combination to the work — a trained architectural designer who has also led brand and marketing strategy at scale, with a working understanding of natural stone as a building material.

Set alongside more than two decades of stone-industry depth from co-founding partner SAI Stone, that combination is the company’s DNA. It allows Urblo to sit in a design review and speak the language of section details and intent; in a procurement meeting and speak the language of margin and program risk; beside a CNC operator and speak the language of tooling and tolerance. Few suppliers in this category move comfortably across all three rooms — and that fluency is what Urblo is built around.

For Natalie, the brief has always been the same: to bridge the long-standing gap between creative design and built reality, and to prove the transformative power of natural materials in shaping the urban environments where people live, gather and move through. Urblo is the answer — a fusion of contemporary design and timeless durability, integrated into the modern city with respect for the people and the environment it serves.

The next decade of public realm, Natalie believes, belongs to designers who think about material as authorship — and to suppliers who are willing to think like designers. Urblo is built for that conversation: design-fluent at the front of the studio, technically rigorous behind the factory door, and accountable to the same standard either way.

- **We speak design, and we speak construction**
Our architectural foundation means we read complex geometries and DDA compliance on instinct. Our manufacturing depth means we know exactly how to build them on civil program.
- **We solve, we don't just supply**
When we flag an issue, we bring the resolved alternative to the same conversation — engineered, costed, and ready to be drawn in.
- **We scale to the rhythm of your project**
External detailing hub for time-poor studios; primary supplier for tier-one civil builds. We maintain the same standard either way.
- **We're design-owned**
Decisions about finish, tolerance and craft are made by people whose first instinct is design, not just procurement.

WEST SIDE PLACE

Iconic High-Rise Plaza & Public Realm

Over 500 linear metres of custom-fabricated landscape seating and sculptural blocks.
